TT Fuel Launches Latest Technology as Premier Opens Global HQ

The Honourable Steven Marshall MP, Premier of South Australia, today officially opened the new Global HQ for TT Fuel at Torrensville in the west of Adelaide. The new facility, although already operational, houses in one location senior management, global marketing, international and domestic sales, a 24/7 customer support call-centre, software design and development, hardware design and development, systems engineering, advanced manufacturing, and support services including finance.

TT Fuel is a global technology business that enables clients to manage the storage and handling of hydrocarbons whilst mitigating risk and realising opportunity. It has global experience supporting companies with fuel management systems, outdoor payment terminals, forecourt controllers, point of sale terminals, bulk fuel loading systems, management software services and specialised fuel storage & dispensing solutions. It is Adelaide based and Australian owned.

TT Fuel made the move to the new location after a huge investment in the development of a new generation of technology that will underpin its business for the next 10 years and beyond. TT Fuel has launched its new TT8800 outdoor Payment Terminal and T-POS retail point of sale terminal in the past 6 weeks as the first two products to be built on the new technology platform.

“The opening of our new Global HQ and the launch of our new products herald a period of unparalleled growth for our business”, says Liam Cahill, Managing Director of TT Fuel.

TT Fuel had its origins as a university technology start-up from the 1980s. Although the original company was based on Radio Frequency Identification (RFID) technology, the company developed enabling technology, products and systems to deliver benefits to customers. Eventually, the enabling technology became the focus of the business.

The original company has now had several owners with the current owners, a group of venture entrepreneurs, taking over ownership and management of the business in August 1998 as we have heard. Over the past 20+ years, they have been investing capital, expertise and energy to grow the business, including a huge investment in developing the next generation of fuel control technology which will make it a world leader.

continues....

“We could have moved TT Fuel back to our home state when we originally bought the business”, says Cahill. “But once they moved here, we came to understand the benefits of the exceptional lifestyle in Adelaide, the great food and wine, and the ease of getting around, all of which was conducive to creating a congenial workplace that made it easy to keep the best people.”

It is anticipated that TT Fuel will launch another 3 key product ranges over the course of the next 6 months.

– Ends –
