Important: Please call TT Fuel helpdesk (+61 8 8215 5000) to get your FC6000-T Forecourt Controller configured for your specific deployment.

Connect peripherals and power

Refer to the back side of this page for the connection diagram. Using a dedicated 240VAC circuit protected by an Uninterruptible Power Supply (UPS) for the FC6000-T controller is highly recommended.

Power ON

Power on the FC6000-T Forecourt Controller then the T-POS Terminal.

Note: Although an Uninterruptable Power Supply (UPS) is not required nor provided, including one in your deployment is highly recommended.

Complete the Initial Setup

First, make sure there are no severe alerts reported in the alert banner. Then, start to manage the customer display media, apply your logo, configure the printer settings and configure the T-POS Operators. For detailed information on how to perform customisation operations on the T-POS, please refer to the [T-POS Terminal User Manual](#).

Add Inventory and Familiarize with the T-POS Terminal

Refer to the [T-POS Terminal User Manual](#) for learning about all the capabilities TT Fuel T-POS Terminal has to offer and get proficient in day to day operations.
