## T-POS Set to Empower Independent Retail Fuel Businesses Globally

TT Fuel today launched a new generation Point of Sale (POS) terminal that it claims will transform the global fuel industry by empowering independent retail operators. The new product is called T-POS and it makes advanced capabilities available to a broader range of retail businesses through the utilisation of the latest technology.

“The TT Fuel T-POS Terminal is a complete POS solution designed to meet the needs of the global fuel industry”, says Mr Liam Cahill, CEO of TT Fuel. “T-POS will allow businesses to manage all of their sales on one screen; supported by fast, reliable and

intuitive software with an interface purpose built for fuel retailers. It will allow operators to monitor wet-stock and dry-stock levels in real-time with data rich reporting to make meaningful business decisions.”

The new TT Fuel T-POS terminal will also control the operation of all forecourt equipment via the TT Fuel TT6000 controller, including fuel dispensers, automatic tank gauging systems (ATG) and electronic price signs. It will display sales transactions, product advertising and promotions to customers through a dedicated secondary customer facing screen.

TT Fuel is a global technology business that enables clients to manage the storage and handling of hydrocarbons whilst mitigating risk and realising opportunity. For over 3 decades, it has been supporting companies with fuel management systems, outdoor payment terminals, forecourt controllers, point of sale terminals, bulk fuel loading systems, management software services and specialised fuel storage & dispensing solutions.

T-POS joins the recently released TT8800 as the first two of the major product releases that will have resulted from an extensive investment in technology development by TT Fuel over the past few years.

“We strive for durability, simplicity and exceptional performance when designing our products and solutions, which is something that we believe is self-evident in the design of T-POS”, says Mr Cahill. “Further, our flexible solution architecture allows us to help customers manage change in their business and industry. This all makes T-POS the perfect solution for independent retail operators.”

T-POS has a powerful yet simple touch screen interface, which enables fast and efficient operation. It is easy to configure and customise to fit different business needs. Security settings can be easily matched to staff roles and responsibilities. T-POS will automatically synchronise with fuel dispensers and electronic price signs allowing wet stock product price changes to be managed from one place. It is certified to OIML R117 under NMI Certificate of Approval S422.
